## Professional Experience :

- Strong experience in design , implementation , development and maintenance of large business applications using **React** , Html , Css.
- Experience in working with Javascript ES6
- Experience in working with AJAX , JSON
- Experience in NOSQL (MongoDb or LevelDB )
- Experience of working in the complete **Software development life cycle** involving development, documentation, testing and maintenance.

## SOFTWARE SKILL SET

Languages	Javascript (ES6)
Web Technology	HTML , CSS , React , Node.js , Bootstrap , JSON
Framework, Library & SDK	Redux , Material UI , Firebase , Express.js, lodash.js
Databases	MongoDB , MySql , LevelDB
Software Development Tools	Visual Studio Code , Webstorm , Atom
OS	Unix ( Ubuntu ) , Windows
Version Control Tools	Git
Project Management Tools	Jira

## WORK EXPERIENCE / PROJECT DETAILS

---

### Organization: QA Infotech Pvt. Ltd.

Project Name	Teachstone
Description	Teachstone is a online Trainer and Students Training and certification platform . Using this the student get in touch with their teacher and the teacher can get

	their certifications for as a professional trainer , their some multiple class module in the app like toddler , infant etc for student and also trainers can be scored according to their performance and vice versa .
Responsibility	<ul style="list-style-type: none"> <li>• Worked with the add score screen for the trainers module</li> <li>• Created on the custom timepicker component for the app.</li> <li>• Created whole new check box component for the app.</li> <li>• Worked on the Cycle forms in app using React and Redux store.</li> <li>• Worked with some Design changes as suggested by designer through Adobe PSD's</li> </ul>
Technology Used	ReactJS, Redux, Html, CSS,SASS, JavaScript ES6 , Git

Project Name	HBP Dev Project ( Harvard Bussiness Publishing )
Description	Harvard Bussiness Publishing Project is a Educational domain project , which is basicalled a tutorial web application for the evaluation of the students . The project have the Tutorial vedios in attach in the webapp , student have to view the tutorial added by the professors and then thier is a assignment questions attached to every video which students have to answer . At the end student can submit their assignment and their whole questions and answer where downloaded in the form of pdf
Responsibility	<ul style="list-style-type: none"> <li>• Worked on application from scratch , <b>designed &amp; setuped</b> whole structure of the app using React.</li> <li>• Created all the custom Component for the app from scrolling dots , navigation , tickle buttons , buttons and input boxes etc all the components where designed by the design guide provide by client.</li> </ul>
Technology Used	ReactJS , Html, CSS,Bootstrap, JavaScript, Git

Project Name	ValidationMe
Description	ValidateMe is documents / user / candidates Verification webapp . This project is basically a wide verification system like in this app the anyone can register himself as user , they can upload their documents and create their profiles , But major thing is the documents have been upload using the etherium blockchain . Where as there are companies or any organization can register and the candidates can request for the documents verification and the organization can verify the valid documents.
Responsibility	<ul style="list-style-type: none"> <li>• Worked with the Material UI in this project , Designed the application using the material UI in React with the help of the Adobe PSD's provided by designer.</li> <li>• Involved with the admin panel team , Worked for the many admin api's for registration of the new users or co-user in the admin panel .</li> <li>• Done some POC's on <b>gatsby.js and graphql</b> initially for the admin panel.</li> </ul>
Technology Used	ReactJS , Html, CSS , JavaScript, IPFS, Node.js , Mongoddb , Redis , Material UI , Git

**Organization: Sugal & Damani Group.**

Project Name	Transaction Storing System
Description	Sugal & Damani is a product based company , S&D works around the Online Gaming business and manages offline Lotery on India in major states , they have many online games like luckykhel.com , khelplay.com etc . So this project is about the transactional data collection system using the private custom blockchain . In this project , Every online games transactional data is gets picked at midnight using cron jobs in node.js so that the transactional data can be stored in the block of block chain . this process take nearly 12 hr approx for writing daily data in the blockchain .
Responsibility	<ul style="list-style-type: none"><li>• Worked on the Admin panel for the better visualization of daily major Transactions in the system.</li><li>• Created major admin panel UI like all the components like tables , buttons, inputs, and mojour forms , side navbar etc .</li><li>• As there is no designer is involed the application is designed by daily brainstorming with senior frontend Architects or developers.</li><li>• Also worked with the backend team , Implemented Blockchain Application for storing the daily transactional data.</li><li>• Implemented an Apis for getting out the daily data and extracting and optimising that , Verify chain process , Generating Nonce , Writing a Block process Responsible for creating Process for syncing the chain to the network and Registering a new node to the network.</li></ul>
Technology Used	ReactJS , Html, CSS, Bootstrap, JavaScript , Node.js , levelDb , AWS ec2 , Git

**ACADEMIC QUALIFICATION**

---

- Bachelor of Technology in Computer Science & Engineering with 80 %  
Dr. APJ Abdul Kalam Technical University

**STRENGTHS**

---

- Hard Work. • Adaptability. • Interest in Emerging Technologies. • Quick Learner. • Ready to take responsibility.

**OTHER DETAILS**

---

- Current Location : Delhi NCR
  - Marital Status : Unmarried
- Passport : Yes
